

Oracle R12 Implementation

Business Challenge

The client's customers had issues in tracking raw stock which are similar in nature. As the stocks are perishable items it requires total control in tracking / movement. Any delay in using the stock within the limited time-frame would lead to huge loss in terms of material and manpower. Also, their customer's were facing issues in establishing a fool-proof revenue recognition process, since most of the payments were through bank transactions, and any delay would lead to huge revenue loss

Technology Solution

In order to eliminate losses due to material-tracking, we proposed and implemented innovative solutions within the R12 WMS Module. Regarding revenue leakage on account of delays in bank payments, we proposed and implemented seamless integration of any revenue transaction via Banks using an Auto Lock Box facility. We brought a change in the Formula Management Process by incorporating a by-product functionality .

Technology Used

R12 WMS Implementation, Oracle Process Manufacturing Global Support and Enhancements, R12 SCM Global Support and Enhancements, R12 Global Financials Support and Enhancements

Implementation challenges

There were too many products with many variants, and hence it was difficult to understand the production process, understand the gaps in order to ensure completeness in production process flow

Benefits

- Net saving of 20% due to Revenue Leakage
- Streamlined operations – minimizing costs and maximizing yields
- Technical Support on RICE Objects
